Springer Extends Online Peer Review System

Newton, MA, USA — March 14, 2007. Springer Science+Business Media will expand Editorial Manager, its online peer review system, to an additional 600 journals over the next two years. The expansion includes software that automatically links bibliographies of author-submitted manuscripts to PubMed and CrossRef during the peer review process. Also, author bibliographies will be automatically converted to Springer bibliography formats, and validated XML will be transferred to Springer's journal production system.

The new functionality will reduce the effort required by authors to format manuscripts for publication and will facilitate the editorial tasks undertaken by reviewers and editors. The linked bibliography provides a convenient way to assess the quality of the authors' citations and to "drill down" to explore cited literature. The end result is a higher-quality authoring, editing, and reviewing experience for the scholarly community, combined with improvements in publication speed and efficiency.

Springer's journal production division will benefit from the implementation because the system does not require authors to pre-format the manuscript or use costly citation management software. Commenting on this approach, Arjan Grootenboer, Executive Vice President Production at Springer, said, "By embedding the software intelligence in the peer review system, we are making life easier for Springer authors. The linked bibliography is a great tool for reviewers and editors, and helps them to be more effective in assessing the manuscript. A rationalized workflow will also help us achieve shorter time to publication."

Springer Science+Business Media (www.springer.com) is one of the world's leading suppliers of scientific and specialist literature. It is the second-largest publisher of journals in the science, technology, and medicine (STM) sector, the largest publisher of STM books, and the largest business-to-business publisher in the German-language area. The group publishes over 1,700 journals and more than 5,500 new books a year, as well as the largest STM eBook Collection worldwide. Springer has operations in over 20 countries in Europe, the USA, and Asia, and some 5,000 employees. In 2006, it generated annual sales of around EUR 924 million.

About Inera Inc. — Since 1992, Inera (<http://www.inera.com>) has focused on supplying sophisticated editorial and production solutions to the publishing industry. Inera's eXtyles[®] product family provides integrated tools for Microsoft Word and content management systems that automate editorial, reference linking, and XML production processes. eXtyles products are used in the production of over 600 prestigious journals worldwide.

About Aries Systems Corporation — Since 1986, Aries Systems has successfully delivered technology that enhances the scientific publishing process: *Knowledge Finder*[®] (<http://www.kfinder.com>) for on-line literature searching; *DocuRights*[®] (<http://www.docurights.com>) digital rights management for STM publishers; and *Editorial Manager*[®] and *Preprint Manager*[®] (<http://www.edmgr.com>) for online manuscript submission, tracking, and post-acceptance production management.
